

**AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions, and listings, of claims in the application. Please amend claims 31, 35, 39 and 41 as follows:

**LISTING OF CLAIMS:**

1-18. (Canceled)

19. (Previously Presented) An image shooting apparatus, comprising:

a silver salt picture shooting section including a silver salt picture recording section for recording a picture on a silver salt-based medium, and a silver salt information recording section for recording information relating to the picture which is recorded on the silver salt-based medium;

a video picture shooting section;

a video signal recording section for recording a video signal obtained by the video picture shooting section and video information, said video information relating to the shooting of the video picture;

a silver salt film individual identification number/frame number provider for outputting an individual identification number and a frame number of a silver salt film used as a recording medium for the silver salt picture shooting section,

wherein said silver salt information recording section records an individual identification number outputted from the silver salt film individual identification number/frame number provided onto said silver salt film, and

wherein said video information recording section records an individual identification number and a frame number outputted from the silver salt film

individual identification number/frame number provider into an image signal corresponding to said individual identification number and said frame number.

20. (Original) An image shooting apparatus as claimed in claim 19, wherein the silver salt information recording section is capable of recording various items of information other than information outputted from the silver salt film individual identification number/frame number provider.

21. (Original) An image shooting apparatus as claimed in claim 19, wherein the video signal recording section is capable of recording various items of information other than information outputted from the silver salt film individual identification number/frame number provider.

22. (Original) An image shooting apparatus as claimed in claim 21, wherein the various items of information include at least two out of date and time, printing information recording location, print aspect ratio, light source nature, number of prints, title, lens focal length, aperture value, shutter speed, exposure compensation value, film ISO sensitivity, subject luminance, photometry method, television display aspect ratio.

23. (Original) An image shooting apparatus as claimed in claim 21, which is provided with a signal converter for converting the various items of information into a character signal,

wherein the various items of information converted by the signal conversion means are recorded as an image signal by the video signal recording section.

24. (Original) An image shooting apparatus as claimed in claim 19, wherein, when silver salt picture shooting is performed while video signal recording is not in progress, the video signal recording section records a video corresponding to said silver salt picture, and records information corresponding to said silver salt picture outputted from the silver salt film individual identification number/frame number provider.

25. (Original) An image shooting apparatus as claimed in claim 19, wherein, when silver salt picture shooting is performed while video signal recording is in progress, the video signal recording section records a video corresponding to said silver salt picture, and records information corresponding to said silver salt picture outputted from the silver salt film individual identification number/frame number provider.

26. (Original) An image shooting apparatus as claimed in claim 19, further comprising:

a video recording medium individual identification number provider for outputting an individual identification number of a video recording medium,

wherein the silver salt information recording section records the individual identification number of the video recording medium outputted from the video recording medium individual identification number provider onto a corresponding

silver salt picture shooting section, and records the individual identification number of the video recording medium outputted from the video recording medium individual identification number provider.

27-30. (Canceled)

31. (Currently Amended) A photographing apparatus comprising:

a first recording section for recording, on a first recording medium, mainly still pictures together with information relating to the still pictures thus recorded;

a second recording section capable of recording, on a same second recording medium, both moving pictures and also pictures to be reproduced as still pictures;

and

a controller for controlling the photographing apparatus, which is operated by a voluntary operation of an operator, to selectively carry out a plurality of shooting and reproducing modes, said shooting modes including a mode in which the still picture and information relating thereto are recorded on the first recording medium, a mode in which the moving picture is recorded on the second recording medium, and a mode in which the picture to be reproduced as the still picture is recorded on the second recording medium, said reproducing modes including a mode in which information relating to the still picture recorded on the first recording medium is displayed, a mode in which the moving picture recorded on the second recording medium is reproduced, a mode in which the picture recorded on the second recording medium so as to be reproduced as the still picture is reproduced, and a

mode in which the still picture is reproduced out of the moving picture which is recorded on the second recording medium to be reproduced as the moving picture.

32. (Previously Presented) A photographing apparatus as claimed in claim 31,

wherein the information recorded on the first recording medium is information used when the still picture recorded on the first recording medium is printed.

33. (Previously Presented) A photographing apparatus as claimed in claim 31,

wherein, in any of the modes in which the moving picture is recorded, an aspect ratio of the picture can be varied.

34. (Previously Presented) A photographing apparatus as claimed in claim 31, further comprising:

a display for displaying the still picture, the moving picture, or information in any of the reproducing modes.

35. (Currently Amended) A photographing apparatus comprising:

a first recording section for recording, on a first recording medium, mainly still pictures together with information relating to the still pictures thus recorded;

a second recording section capable of recording, on a same second recording medium, both moving pictures and still pictures; and

a controller for controlling the photographing apparatus, which is operated by a voluntary operation of an operator, to selectively carry out a plurality of shooting and reproducing modes, said shooting modes including a mode in which the still picture and information relating thereto are recorded on the first recording medium, a mode in which the moving picture is recorded on the second recording medium, and a mode in which the still picture is recorded on the second recording medium, said reproducing modes including a mode in which information relating to the still picture recorded on the first recording medium is displayed, a mode in which the moving picture recorded on the second recording medium is reproduced, a mode in which the still picture recorded on the second recording medium is reproduced, and a mode in which the still picture is reproduced out of the moving picture which is recorded on the second recording medium to be reproduced as the moving picture.

36. (Previously Presented) A photographing apparatus as claimed in claim 35,

wherein the information recorded on the first recording medium is information used when the still picture recorded on the first recording medium is printed.

37. (Previously Presented) A photographing apparatus as claimed in claim 35,

wherein, in any of the modes in which the moving picture is recorded, an aspect ratio of the picture can be varied.

38. (Previously Presented) A photographing apparatus as claimed in claim 35, further comprising:

a display for displaying the still picture, the moving picture, or information in any of the reproducing modes.

39. (Currently Amended) A photographic apparatus comprising:

a recording section capable of recording, on a same recording medium, both moving pictures and also pictures to be reproduced as still pictures;

a controller for controlling the photographing apparatus, which is operated by a voluntary operation of an operator, to selectively carry out a plurality of shooting and reproducing modes, said shooting modes including a mode in which the moving picture is recorded on the recording medium and a mode in which the picture to be reproduced as the still picture is recorded on the recording medium, said reproducing modes include a mode in which the moving picture recorded on the recording medium is reproduced, a mode in which the picture recorded on the recording medium so as to be reproduced as the still picture is reproduced, and a mode in which the still picture is reproduced out of the moving picture which is recorded on the recording medium to be reproduced as the moving picture; and

an aspect ratio selector for varying, in any of the modes in which the moving picture is recorded, an aspect ratio of the picture.

40. (Previously Presented) A photographing apparatus as claimed in claim 39, further comprising:

a display for displaying the still picture or the moving picture in any of the reproducing modes.

41. (Currently Amended) A photographic apparatus comprising:

a recording section capable of recording, on a same recording medium, both moving pictures and still pictures;

a controller for controlling the photographing apparatus, which is operated by a voluntary operation of an operator, to selectively carry out a plurality of shooting and reproducing modes, said shooting modes including a mode in which the moving picture is recorded on the recording medium and a mode in which the still picture is recorded on the recording medium, said reproducing modes include a mode in which the moving picture recorded on the recording medium is reproduced, a mode in which the still picture recorded on the recording medium is reproduced, and a mode in which the still picture is reproduced out of the moving picture which is recorded on the recording medium to be reproduced as the moving picture; and

an aspect ratio selector for varying, in any of the modes in which the moving picture is recorded, an aspect ratio of the picture.

42. (Previously Presented) A photographing apparatus as claimed in claim 41, further comprising:

a display for displaying the still picture or the moving picture in any of the reproducing modes.
